Whitemud Creek Mining Co.

This is a recreational sluice that allows students to discover rocks, gemstones, fossils, and other minerals in a controlled setting.

Each student receives a bag of rough filled with either rocks & minerals or fossils (that they get to keep). They rinse the rough through a panning screen to find the items. A key to each item is included that says where the item came from and it's make up.

This activity is not long and may be added to other activities or be repeated.

Smiles and geological treasures guaranteed!
